Narrative

CASE NARRATIVE

Client: Pace Analytical Services, LLC

Project: PFAS, NY DW

Report Number: 200-49249-1

With the exceptions noted as flags or footnotes, standard analytical protocols were followed in the analysis of the samples and no problems were encountered or anomalies observed. In addition all laboratory quality control samples were within established control limits, with any exceptions noted below. Each sample was analyzed to achieve the lowest possible reporting limit within the constraints of the method. In some cases, due to interference or analytes present at high concentrations, samples were diluted. For diluted samples, the reporting limits are adjusted relative to the dilution required.

Calculations are performed before rounding to avoid round-off errors in calculated results.

All holding times were met and proper preservation noted for the methods performed on these samples, unless otherwise detailed in the individual sections below.

RECEIPT

The samples were received on 06/18/2019; the samples arrived in good condition, properly preserved and on ice. The temperature of the cooler at receipt was 0.1° C.

PERFLUORINATED HYDROCARBONS

Samples S-15687, S-24848, S-31636, BLENDED INF and BLENDED EFF were analyzed for Perfluorinated Hydrocarbons in accordance with Method ISO 25101. The samples were prepared on 06/25/2019 and analyzed on 07/04/2019.

The 18O2 PFHxS and 13C3 PFBS Isotope Dilution Analyte (IDA) recoveries are above the method recommended limits for the samples, S-15687 and BLENDED INF. The 18O2 PFHxS Isotope Dilution Analyte (IDA) recoveries are above the method recommended limits for the samples S-24848 and S-31636. The 13C3 PFBS Isotope Dilution Analyte (IDA) recovery is above the method recommended limit for the continuing calibration verification, CCVL 200-144726/3. The 18O2 PFHxS and 13C4 PFOS Isotope Dilution Analyte (IDA) recoveries are above the method recommended limit for the continuing calibration verification, CCV 200-144726/87. Quantitation by isotope dilution generally precludes any adverse effect on data quality due to elevated IDA recoveries.

The 13C4 PFOA Isotope Dilution Analyte (IDA) recoveries associated with the samples, S-15687, S-24848, S-31636 and BLENDED EFF are below the method recommended limits. Generally, data quality is not considered affected if the IDA signal-to-noise ratio is greater than 10:1, which is achieved for all IDA in the samples. All detection limits are below the lower calibration.

No analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.
